PATIENTS DESERVE TO KNOW
SMOKING vs. VAPING

Vaporizing (aka “vaping”) is a far healthier way to ingest cannabis, compared to combusting (aka “smoking”). To help patients choose the healthier alternative, Temescal Wellness sells a variety of industry leading vaporizers. Ask your Patient Service Associate today!

SMOKING

COMBUSTED SMOKE CONTAINS

12% CANNABINOIDs

88% NON-CANNABINOIDs

CANNABIS BEGINS TO COMBUST 392°

 HOW HOT A CIGARETTE CAN BURN 2,012° F

VAPING

VAPORIZED GASES CONTAIN

95% CANNABINOIDs

5% NON-CANNABINOIDs

OPTIMAL TEMP. FOR VAPORIZATION 338°

CANNABINOIDs BEGIN TO VAPORIZE 285°
Vaporization delivers therapeutic cannabinoids with far less harmful carcinogens than in combustion. Vaporizing, or “vaping”, raises the temperature just high enough to release the therapeutic molecules of the cannabis plant, or “cannabinoids”, but not so high that it unnecessarily releases other carcinogenic substances.

BENEFITS OF VAPING:

- REDUCED HARM ON LUNGS
- LESS HARMFUL TOXINS
- FEWER SIDE EFFECTS
- MORE EFFICIENT
